Profile

Hi, I'm a full stack web and mobile engineer with an attention for detail. With eight years of professional experience, I'm well versed in implementing high-quality, user-centric applications across various platforms

Work & Experience

Support Specialist, eLink Design; Lexington Kentucky — 2015 - 2018

- Worked on day-to-day support emails and tickets, which spanned a wide range of technical difficulties such as email, server, or website issues and updates
- Participated in technical meetings to ensure effective resolution of issues
- Maintained security and updates for several cPanel servers with a multitude of clients (100+)

Mid-Level Full Stack Developer, eLink Design; Lexington Kentucky — 2018 - 2021

- Successfully led implementation of Vue and accompanying build system using Webpack for in-house framework's frontend stack
- Worked on a variety of projects ranging from subscription based SAAS websites to large scale ecommerce websites
- Focused on attention to detail and design for optimal user experiences
- Ensured well designed architecture and performant database queries across applications

Senior Full Stack & Mobile Developer, eLink Design; Lexington Kentucky — 2021 - Present

- Used native and cross-platform frameworks including UIKit, SwiftUI, and React Native to develop high-scale, enterprise distributed applications
- Helped develop data intensive web applications for a variety of clients
- Helped maintain and manage AGILE development for various project teams, as well as onboarding for new team members

Software Engineer, NoLimits Central, Lexington Kentucky — (2015, Side Project)

- Side project built in Laravel and Vue containing a forum, real-time notifications and messaging, file exchange for custom game format, and more
- Parsed custom game format to extract metadata for ease of use when uploading
- Used Pusher to implement real-time, socket based features
- Implemented custom forum with threads, replies, unread count, categories, roles, and more
